

Windows[®] 7

You don't know what your missing!

Call John now!

Extend the life of your current PC

Windows 7 runs smoother and cleaner than Vista and Windows XP, even at minimal hardware requirements. Many users reported that installing Windows 7 on their old machines had given their computers a new life they didn't think was possible.

Faster Startup

When you need to get on your computer, you will not have to wait 2-3 minutes before you can start working. Average startup times for Windows 7 are around 20 seconds, and even lower when returning from hibernate or sleep modes.

More Secure

Windows 7 is the most secure version of Windows to date, which means less time worrying about viruses, and more time spent productively. Windows 7 does a better job than even the newest Apple operating system when it comes to keeping your critical data safe from hackers.

Improved Navigation

The aero peek feature included in Windows 7 lets you see what is happening in other windows without having to open them. Open windows will go half or full screen, or restored, simply by moving them to the side, top or bottom of your screen. No more clicking on tiny screen elements every time you want a full screen window!

Windows Media Centre

Watch, pause and record live TV*. Listen to your tunes. Show off your photo collection. Enjoy online entertainment. Do all this from your living-room couch! Is it any wonder critics call Media Centre the hidden gem of Windows? It is available in the Home Premium, Professional, Ultimate and Enterprise editions of Windows 7. *Additional hardware may be required.

There's more!
